Product Description

Sentinel RMS is a software licensing SDK for your application(s). It increases revenue by authorizing the use of your application(s) and offers a variety of licensing schemes to boost your product sales. It also provides tools that system administrators can use to track and manage licenses in a network.

Sentinel Cloud Licensing (SCL) add-on for RMS combined with the license enforcement features of Sentinel RMS and the entitlement management features of Sentinel EMS; makes a complete solution that provides the benefits of cloud-connected licensing to applications deployed on the customer's network or hosted online. Usage collection and reporting is the most significant advantage obtained with cloud-connected licensing.

About This Document

This document contains details about the new features, enhancements, and installation of v9.7.0 of Sentinel RMS. The last major release was Sentinel RMS v9.6.0.

What's New in this Release

This section lists down the new features included in Sentinel RMS v9.7.0 release.

Tracking Usage in Isolated Networks

Sentinel RMS v9.7 is enhanced to extend support for tracking usage in isolated environments. This is applicable for standalone and network licenses for the On-premises Deployment Mode.

Following are some of the key points and changes made for enabling this feature:

- This feature is available for users of SCL (Sentinel Cloud Licensing) Add-on for RMS only.
- > This feature works only with license version 21.
- > The SCP service has to be configured to run in offline updated mode for using this feature.
- > The usageInfo query for the sntl_licensing_get_info API is introduced.
- > The readyUsageForUpload action for the sntl licensing transfer API is introduced.
- > Existing sample *sntl_tool* for C, Java, and .NET interface is updated to include:
 - New option for obtaining usage path information.
 - New option for completing ready usage for upload operation.
- > A new sample for C, sntl process ack is provided for deleting usage data on the source machine.
- > For usage persistence cleaning using cleaning library, new options are added.
- > This feature is available with SCL version 5.2.

New License Version

In Sentinel RMS v9.7, license version 21 is introduced to support usage generation for isolated networks.

New Mode Introduced for Sentinel Cloud Plug-in (SCP) Service

Under this enhancement, the following changes are made:

- > The offline_uploaded mode is introduced for the SCP service. This mode is used for processing usage data (for isolated networks) on the proxy machine.
- The offline_uploaded mode supports Windows and Linux only.

NOTE The SCP service is available with the Sentinel Cloud Licensing (SCL) Add-on package.

SCL Add-on for RMS Version 5.2

Sentinel RMS v9.7 supports Sentinel Cloud Licensing (SCL) Add-on v5.2.

New Operating System for Sentinel RMS SDK

From Sentinel RMS v9.7 onwards, support for the Linux ARM operating system is added.

To view the list of supported RMS SDK components for Linux ARM, refer to Platforms, Libraries, and Compilers.

New Operating System for SCL Add-on for RMS

From Sentinel RMS v9.7 onwards, support for the Linux ARM operating system is added for users of SCL Addon.

NOTE It is important to note that only standalone mode is supported here.

Enhancement in Vendor Usage Data Behavior for SCL Add-on for RMS

Vendor usage data attribute set for an API (login_attr/refresh_attr/logout_attr) will not impact any later API calls. For more information, refer to Sentinel RMS API Reference Guide.

Documentation Related Information

New Document Title for SCP Guide

The Sentinel Cloud Plug-in (SCP) Installation and Configuration Guide is renamed to Sentinel Cloud Licensing (SCL) Add-on Installation and Configuration Guide.

Reference Documents

The following documents are updated to provide information related to usage in isolated environments.

> Sentinel EMS and Sentinel RMS Solution Guide

- > Sentinel Cloud Licensing (SCL) Add-on Installation and Configuration Guide
- > Sentinel RMS Developer Guide
- > Sentinel RMS API Reference Guide
- > Sentinel RMS System Administration Guide

Issues Fixed in this Release

The following issues have been corrected in this release.

Internal Tracking ID	Description
SM-65940	Enhancement in the vendor usage data attribute behavior under Unified APIs.
SM-75385	Korean language characters are incorrectly displayed in usage logs and on WlmAdmin tool. This issue is observed on RMS License Manager version 9.1 to 9.6.
SM-74682	Cancel lease API returns "Cancel Lease Successful" in case of failure and when error exists in the trace log.
SM-71640	VLSsetContextData API sets context data even if the length of the buffer (buff_len) is set to 0.

System Requirements

The following table provides the minimum hardware and software requirements for using Sentinel RMS.

Build Environment Recommendations

Hardware Requirements	Software Requirements
Processors: x86-64 processors for 64-bit	Operating Systems: > Red Hat Enterprise Linux (RHEL) 7.x > Red Hat Enterprise Linux (RHEL) 8.x > Debian Linux 9.x > Debian Linux 10.x > Ubuntu Linux 16.04 > Ubuntu Linux 18.04
Hard Disk (Minimum) 150 MB of free hard disk space	Compiler: Clang (64-bit): 3.5
 RAM (Minimum) 4 GB capacity for: Red Hat Enterprise Linux (RHEL) 8.x 2 GB capacity for: Red Hat Enterprise Linux (RHEL) 7.x Ubuntu Linux 16.04 Ubuntu Linux 18.04 2 GB capacity for: Debian Linux 10.x 512 MB capacity for: Debian Linux 9.x 	Java Runtime: Java Runtime Environment version 1.6, 1.7 and 1.8 for the Java interface. Android SDK: Android SDK version 28.
	PDF File Viewer (for viewing PDF documents): Adobe Acrobat 4.0 (or later)

Deployment Environment Recommendations

Hardware Requirements	Software Requirements
Processor:	Operating System(s):
ARM (64-bit)	> Android 8.x
	> Android 9.x
	> Android 10.x

NOTE From Android 10 onward, read/write access permission for the default storage location should be enabled at the time of application creation. The end user must provide read/write access permission for the default storage location.

Installation Information

This section contains important information related to the installation of Sentinel RMS v9.7.0.

Before installing the Sentinel RMS SDK, you must have the following:

- > Administrator Privileges: Administrator privileges are required to successfully install all the components.
- > Sentinel RMS SDK Serial Number: A valid serial number. The installer prompts you to enter the serial number provided to you.

Installation Instruction

The Sentinel RMS SDK is packaged as a tar file. To install Sentinel RMS SDK for Android, you need to first extract the contents of the package and then execute the installation script on Linux (64-bit).

1. Extract the contents of the package, using the following command:

```
tar -xvf RMSSDK9.7.0.xxxxAndroid.tar
```

2. Navigate to the slm_0970_android_combo_cdrom directory, and execute the install script:

```
cd slm_0970_android_combo_cdrom
sh INSTALL.sh
```

- 3. Accept the license agreement to proceed with installation.
- **4.** Enter the path of installation directory.
- **5.** Type the RMS SDK serial number. This serial number is contained in the Sentinel Order Credentials email and is unique for each software vendor.

Installed Directories

The following directories and files are installed.

Directory	Description
development	Contains all the RMS libraries, header files.
manuals	Documentation for Sentinel RMS SDK.
samples	Examples that illustrate the various features of Sentinel RMS. The include files, which provide the prototypes for various Sentinel RMS library functions.
install.rbo	Contains information about Sentinel RMS SDK version and serial number.
ReleaseNotes.pdf	This file.

Sentinel RMS Documentation Resources

The following are the major documentation resources for the product.

Sentinel EMS and Sentinel RMS Solution Guide

This guide provides the complete overview of the Software Monetization solution. You can use this guide to prepare a comprehensive monetization strategy prior to integrating licensing technology with your software and business processes.

> To view the online version of the latest document, click here.

Sentinel Cloud Licensing (SCL) Add-on Installation and Configuration Guide

This guide describes the procedure for installing and configuring SCP for Cloud-Served Lease and On-premises deployment modes, respectively. This is applicable to Windows, Linux, Mac, Android, and Linux ARM operating systems. Additionally, it describes the components included in the SCP package for serving Cloud-Connected deployments.

> To view the online version of the latest document, click here.

Sentinel RMS Developer Guide

This guide contains the complete product overview, the necessary information for licensing and distributing the applications. Useful for developers planning and implementing licensing. To access, use the following ways:

> To view the online version of the latest document, click here.

Sentinel RMS API Reference Guide

This guide contains details about all the API functions, including the licensing library, system initialization, and so on. Useful for developers integrating the API functions in the code. To access, use the following ways:

> To view the online version of the latest document, click here.

Sentinel RMS System Administrator Guide

This guide contains details about using the system administration and License Manager configuration options. Useful for the System Administrator of the end user (on the customer site). To access, use the following ways:

- > The HTML version installed on the system can be accessed using the Doc Access Page (.htm) in the Manuals directory.
- > To view the online version of the latest document, click here.

License Generation Reference Guide

This guide contains details about the License Generation API functions. To access, use the following ways:

> To view the online version of the latest document, click here.
